

This is for questions and what not
Comments for v00.00.05 main

I think that it would be a good idea to slow down a bit and take it step by step. You got it to a cool spot very quickly unfortunately I did not explain enough and you got very far ahead before I could look at it. This is all ok though.

Lets go back to the start. With The code i sent you here are a few changes i would like you to make

1: have the game log on the left of the turn bubble

2: make sure the player can't go under 2 people this soft locks you

- Sometimes when a player runs out of timbermellows they can kill off all the humans till there is only one left; this will soft lock them and force a restart. This is fine if the player is ok with that but that should not be the default difficulty.

3: hide all 5X buttons they are for when you get some tech

- 5x buttons are to help remove some repetitive actions on the game but need to be given to the player after a bit so they are happy its given them
- Eventually I want players to be able to set an amount that the button will be clicked and have it happen at once to help remove redundant choices they are making so they can focus on new problems

4: hide stone and house's they will also be a tech

- Rn stone houses only do anything when winter comes so it should appear after the first winter happens
- We will need a floor for peoplecap of maybe 6 or something to keep the player from gaining or losing too much the first winter

5: shrink the resources tab a good bit

6: add a tech for wood triggers with 3 people and lets the player gather wood. have the wood button show up

- I want the player to be greeted with as little info as possible when they start playing the game. So wood and barns need to be made hidden
- After they get a few people and they don't starve they get wood

7: change how humans are kept alive

- I want all food sources to be converted to calories.
- 1000 for timber mellow
- Humans will have a min cal intake of 1000 for 4 WH
- A max of 2500 for 10 WH
- 250 cal per one work hour
- After 10 turns without losing any humans the cap for how many cal each human eats will increase by 250 this can happen 2 times before it jumps to 25 turns for the next increase of 250 it will keep that trend till it hits the cap
- This will stay behind the scene for now until they start of the timber mellow famine
